Chapter 1

File Index

1.1 File List

Here is a list of all files with brief descriptions:

main.cpp	3
--------------------------	-------	---

Chapter 2

File Documentation

2.1 CMakeLists.txt File Reference

Functions

- [cmake_minimum_required](#) (VERSION 3.10) project(FileEncryptionTool) set(CMAKE_CXX_STANDARD 11) option(USE_OPENSSL "Use OpenSSL for encryption" ON) option(USE_LIBAKRYPT "Use Libakrypt for encryption" OFF) add_executable(file_encrypt main.cpp) if(USE_OPENSSL) find_package(OpenSSL REQUIRED) if(WIN32) set(OPENSSL_USE_STATIC_LIBS TRUE) include_directories(\$

2.1.1 Function Documentation

2.1.1.1 cmake_minimum_required()

```
cmake_minimum_required (  
    VERSION 3. 10 )
```

2.2 main.cpp File Reference

```
#include <iostream>  
#include <getopt.h>  
#include <openssl/evp.h>  
#include <string>  
#include <fstream>  
#include <vector>
```

Include dependency graph for main.cpp:

Functions

- void `print_usage` ()
Prints usage information for the file encryption tool.
- int `main` (int argc, char *argv[])
Main function for file encryption/decryption.

2.2.1 Function Documentation

2.2.1.1 `main()`

```
int main (  
    int argc,  
    char * argv[] )
```

Main function for file encryption/decryption.

This function takes command line arguments to perform encryption or decryption of a specified file using a password-derived key. It uses the OpenSSL library for the cryptographic operations.

Parameters

<i>argc</i>	The number of command line arguments.
<i>argv</i>	The array of command line arguments.

Returns

int Returns 0 if successful, otherwise returns an error code.

Generates a key from the password using PBKDF2.

Uses PKCS5_PBKDF2_HMAC to generate a 256-bit key from the user-provided password.

Parameters

<i>password</i>	User-provided password.
<i>key</i>	Generated key.

Returns

bool Returns true if key generation is successful, false otherwise.

2.2.1.2 `print_usage()`

```
void print_usage ( )
```

Prints usage information for the file encryption tool.

This function outputs the usage details for encrypting or decrypting files. It explains the command line options required to use the tool.
